

UMWIP

"You can't use up creativity. The more you use, the more you have." - M. Angelou

Weekly meetings

August 15 - WiC-WiP event planning meeting

August TBD - beginning of semester celebration meeting

On the weeks July 9th and 16th, the University of Mississippi hosted the STEM Camp for Boys and STEM Camp for Girls, respectively. This week-long summer camp is aimed at middle school students living in the state of Mississippi, and on each day, they explore different topics in STEM such as biology, chemistry, and physics, among others. This is the second year in which the UM Women in Physics participates, and this year a large amount of our members presented physics demonstrations at the summer camp. Some of the concepts introduced were angular momentum, waves, optics, and chaos theory.

Lorena Magaña Zertuche would like to give thanks to those that took part in this great outreach opportunity: Vishal Baibhav, Dripta Bhattacharjee, Thomas Jamerson, Akshay Khadse, Sumeet Kulkarni, Renée Sullivan-Gonzalez, and Sashwat Tanay.
